

Section 2 Push = Distribution

Everything you wanted to know about the Big Bang
but were afraid to ask

New HiTech Findings:

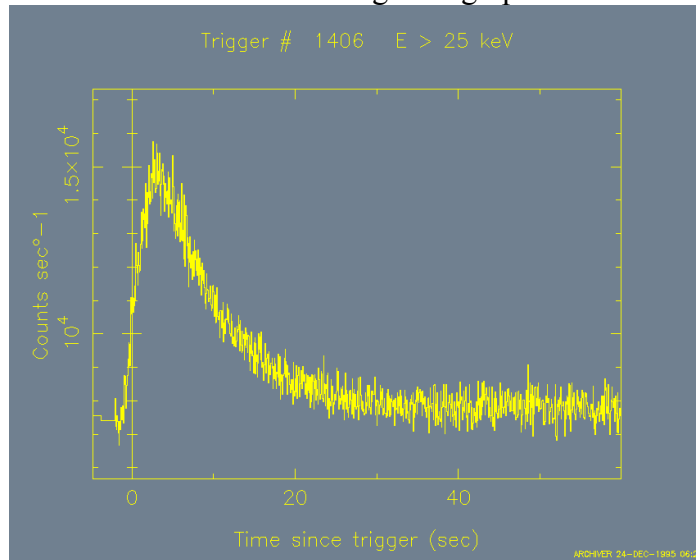

- B. *COSMIC ACCELERATION [Explained with real physics]: **PUSH equals DISTRIBUTION** - Supernovae distribution is a mirror image of a GRB [Gamma Ray Burst] power graph. See GRB Trigger 1406 in Figure 1 below for a reasonable graph of the Big Bang Push. [No assumed expanding, accelerating space, or dark energy required to explain the varying distribution of Supernovae. Just the Big Bang explosion IN energy filled SPACE!]

Figure 1 **[PUSH = DISTRIBUTION]** by author:

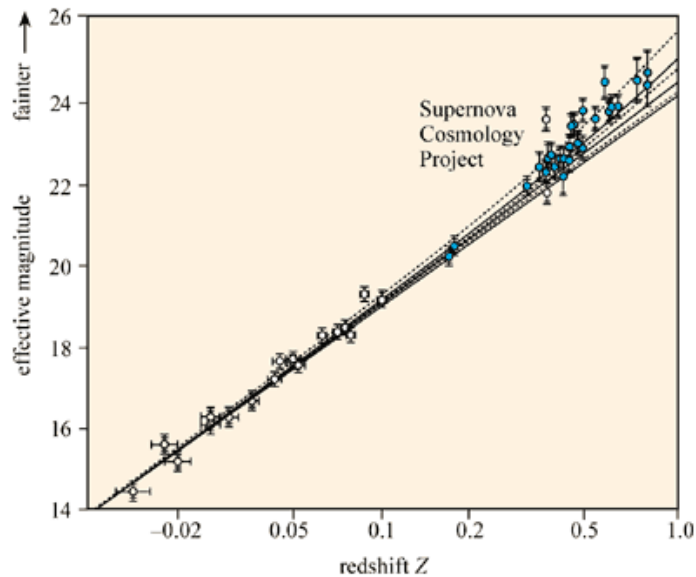

This **Push = Distribution** is basic concept of physics and as the above figure 1 applies basic physics to Cosmology, demonstrating how all celestial bodies are distributed as we see them in the night sky. No mystery.

Documentation for Figure 1 graphs
